

Headaches during your menstrual period?

This clinical trial will help us learn if taking an investigational oral medicine for 7 days each month can help prevent menstrual migraines. By choosing to take part, you will be contributing to research that could help millions of women around the world.

Who can take part?

This clinical trial may be an option if you:

- Are 18 to 45 years of age
- Have regular and predictable menstrual cycles that are 24 to 34 days in length
- Have had migraines for at least 1 year and have had a menstrual migraine (occurring just before or during your menstrual period) in at least 2 of your last 3 menstrual cycles
- Do not have more than 14 migraine days per month
- Do not have more than 6 migraine days per month when you are not on your menstrual period

There are other requirements that the team will discuss with you.

What to expect

You will be randomly assigned to receive the study medicine or placebo (no active ingredient). After 5 months, you will have the option to receive the study medicine in an open-label extension.

You may take permitted medications as needed to treat any migraines that occur.

You will be enrolled for about 10 months and will have about 10 visits.

There is no cost to participate.
